*(*The complete declaration of conformity, you can find at: www.big-arbeitsschutz.de)*

EN 13688:2013/A1:2021 Protective clothing – General requirements
EN ISO 20471:2013/A1:2016 High-visibility warning clothing for professional use –
Minimum areas of visible material (m^2) referred to the minimum size produced:

Material	Garments class 3	Garments class 2	Garments class 1
background material	0.80	0.50	0.14
retroreflective material	0.20	0.13	0.10
material with combined properties	n.a.	n.a.	0.20

PPE category II

Performances: This garments is suitable to be used in presence of low visibility hazards or in conditions where the presence of the wearer must be highly visible (e.g. roadwork, airports), since they can provide the user with high visibility in dangerous situations in any conditions of daylight or when exposed to vehicle lights in darkness. The protection is only given if the garment is not covered, stained or faded. During night protection is only given when light can be reflected. This garment is only suitable to be used on roads outside of towns and highways in combination with an adequate high-visibility warning trousers/bib-pants/shorts (min. class 1) as it only complies with the requirements of EN ISO 20471:20471 class 2.

These PPE items do NOT protect from:

- Chemical hazards
- Caught-in hazards in presence of moving parts
- Mechanical hazards
- Thermal hazards
- Fire crossing and extinguishing hazards
- Hazards different from the ones specified above

Identification and choice: The choice of the suitable garment must be made based on the specific workplace requirements, the type of hazard and the relevant environmental conditions. The employer is responsible for the identification and choice of the suitable and adequate PPE. Therefore, it is opportune to verify the suitability of this garment to your requirements before use.

Warnings: Make a visual check of the garment before use, to verify it has no damages, and is in perfect conditions, clean and intact. In the case of visible damages (e. g. unstitched seams, breaks) the garment must be replaced. The garment complies with the safety features only if worn perfectly and in perfect state of preservation. Alterations of PPE garments are not allowed. Preserve this manufacturers informative note throughout the entire life of the PPE. We decline any responsibility for possible damages and/or consequences arising from improper use.

Instructions of use: If the garment is damaged, please don't repair it, but change a new one.

Instructions for storage, maintenance and transportation: Store in the original packing, protected from sources of light and heat sources (e.g. sun). The garment must be preserved in a dry place. Avoid the contact with solvent which might cause alteration of the products features. For transportation, do not take garments out of the original packing, but keep them in.

Cleaning: 

max. 5x

Wash with same or similar colours. Reshape while damp. Line dry. The test results for colour and luminance had been determined by the certifying-institute after 5 washing-cycles. No impairment of appearance or functionality could have been detected. Information about the maximum number of washing-cycles requires additional testing.

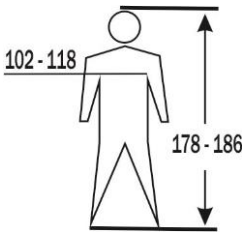

The number of washing-cycles is not the only influencing factor for the durability of garments. The life-span is also determined by usage/application, care/maintenance, disinfection, storage, et cetera. We recommend a usage within 3 years after bringing the product into service, obeying an appropriate storage and intended use. In case the PPE shows fading of colour, damage of the retro-reflective material or any other flaws at an earlier date, the PPE must be replaced promptly.
If you do not obey these care-instructions, the safety-application of the PPE can be considerably reduced.

Production of the PPE:  **xx/2025**

Recycling, safe destruction and elimination: This garment can be thrown in a regular garbage can.

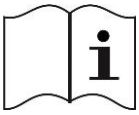

Marking: a label is sewn to the inside of the garment, with the following marking:

CE the CE marking certifies the compliance with the essential safety requirements set forth by the Regulation (EU) 2016/425

Warnschutz-Bekleidung *(high-visibilty garment)*
(4204) Weste *(vest)* (art-no.= example)

Größe *(size)***: Einheitsgröße** *(unisize)* (indicates the size)

 Symbol indicates you should read the informative note before using the product.

 **2** class of the visible material in m² according to chart on previous page.
(The classification of the garment is determined by the smallest area of visible material)

EN ISO 20471:2013/ A1:2016

These instructions for use and storage are approved under the certification-no:19/1123/01/0161
by the Notified Body No.: 0161

AITEX Textile Research Institute
Carretera de Banyeres, 10; 03802 Alcoy, Spanien

in the occasion of the issuance of the CE compliance certificate, as provided by the European Regulation (EU) 2016/425 for category II and III Personal Protective Equipment.

The PPE is available with the following variants:
It can be manufactured with a thermos-sealed logo at the back (max. 0,045 m²) and breast (max. 0,015 m²).

Material: 80 % polyester, 20 % cotton.

Under normal predictable application conditions, this product will not release any substances which are generally known being toxic, carcinogenic, mutagenic, allergenic, reproduction-toxic, or otherwise harmful.
